Two new abietane-type diterpenoids, 15-hydroxy-12-*O*-methylsugiol (**1**) and 2 α -hydroxy-12-*O*-methylsugiol (**2**) were isolated from the methanol extract of the bark of *Cryptomeria japonica*. Their structures were elucidated on the basis of spectroscopic analysis and comparison of NMR data with those of known analogues. Compound **2** showed 13.5% inhibition towards xanthine oxidase enzyme at the concentration of 75 μ M.

Keywords: Cupressaceae, *Cryptomeria japonica*, Abietane, Diterpenoid, Traditional herbal medicine.

Cryptomeria japonica D. Don (Cupressaceae) is the only species of the monospecific genus *Cryptomeria* and is endemic to Japan, known as sugi (Japanese cedar) in Japanese [1]. It is a massive evergreen coniferous tree, growing up to 50 meters in height. Its wood is one of the best building materials and wood products due to the aromatic, reddish-pink in color, soft, lightweight but strong, and waterproof properties. This plant has been an important cultivated coniferous tree species in Taiwan since 1906. Previous phytochemical investigations of the leaves, heartwood, and barks of *C. japonica* led to the identification of diverse terpenoids, including monoterpenoids, sesquiterpenoids, and diterpenoids [2-24]. A variety of biological activities including cytotoxic [23], antifungal [24], antibacterial [25], antioxidant [26], anti-inflammatory [27], and insect antifeedant [28] and repellent [29] properties have been reported for the crude extracts or secondary metabolites from this species. While searching for the new chemical ingredients of the bark of *C. japonica*, we have already reported the isolation of a cytotoxic sesquiterpene (C₃₅), cryptotriene, with an unprecedented skeleton possessing a conjugated abietane and cadinane [30], ten abietane-type diterpenoids [31-33], and two sesquiterpenoids [34]. In this report, we describe the isolation and structure elucidation of two new abietane-type diterpenoids (Figure 1).

Figure 1: Structures of compounds **1** and **2**.

The MeOH extract of the bark of *C. japonica* was suspended in H₂O and partitioned between H₂O and EtOAc. The EtOAc-soluble portion was subjected to repeated silica gel column chromatography and semipreparative normal phase-HPLC to afford compounds **1** and **2**.

Compound **1** has the molecular formula C₂₁H₃₀O₃ as determined by a HR-EI-MS molecular ion at *m/z* 330.2200 and its ¹³C NMR data, representing seven degrees of unsaturation. The ¹H NMR spectrum of **1** (Table 1) displayed signals for five methyl groups [δ_{H} 0.92, 0.98, 1.23, 1.59, and 1.60 (each 3H, s, Me-18, Me-19, Me-20,

Figure 2: Selected HMBC and NOESY correlations of compounds **1** and **2**.

Table 1: ^1H and ^{13}C NMR data for **1** and **2** (400 and 100 MHz in CDCl_3).

^{a)} Coupling constants are presented in Hz.

Me-16, and Me-17, respectively)], and two *para*-oriented benzene protons [δ_{H} 6.82 (1H, s, H-11) and 7.96 (1H, s, H-14)], one set of ABX coupling system neighboring to the carbonyl group [δ_{H} 1.85 (1H, dd, $J = 13.6, 4.4$ Hz, H-5), 2.59 (1H, dd, $J = 18.4, 13.6$ Hz, H _{β} -6), and 2.69 (1H, dd, $J = 18.4, 4.4$ Hz, H _{α} -6)], and one methoxy group [δ_{H} 3.96 (3H, s)]. The ^{13}C NMR experiments (CPD and DEPT 135) revealed 21 carbon signals, comprising five methyl, four methylene, one methine, two quaternary, one oxygenated quaternary, two olefinic methine, four tetra-substituted olefinic, one carbonyl, and one methoxy carbons. The UV absorption band at λ_{max} 276 nm and the IR absorption band at 1672 cm^{-1} indicated the presence of the benzoyl moiety [35]. A typical downshifted H _{β} -1 signal at δ_{H} 2.28 (1H, br d, $J = 12.0$ Hz) and 21 carbon signals in the ^{13}C NMR spectrum including 6 aromatic carbon signals (δ_{C} 105.5, 123.8, 125.1, 133.5, 157.0, and 160.8) hinted that **1** would be a dehydroabietane diterpene [21]. The ^1H and ^{13}C NMR data were similar to those of known compound, sugiol methyl ether (**3**) [35], except for the signals of isopropyl moiety at C-13, replaced by an 2-hydroxyisopropyl substituent [C-15 (δ_{C} 72.3), Me-16 (δ_{H} 1.59, δ_{C} 29.9), and Me-17 (δ_{H} 1.60, δ_{C} 29.8)]. The HMBC correlation between Me-16/C-15 and the NOESY correlation between Me-17/H-14 (δ_{H} 7.96) (Figure 2) confirmed the above proposal. Based on these above evidences, compound **1** was elucidated as 15-hydroxy-12-*O*-methylsugiol.

The UV and IR spectra of compound **2** indicated the presence of benzoyl moiety (278 nm and 1672 cm^{-1}) and hydroxyl group (3409 cm^{-1}). The molecular formula was established to be $\text{C}_{21}\text{H}_{30}\text{O}_3$ from its HR-EI-MS molecular ion at m/z 330.2197, indicating seven degrees of unsaturation. The ^1H NMR spectrum of **2** (Table 1) showed resonances for three methyls [δ_{H} 0.98, 1.03, and 1.26 (each 3H, s, Me-18, Me-19, and Me-20, respectively)], one oxymethine [δ_{H} 4.10 (1H, dddd, $J = 12.0, 12.0, 4.0, 4.0$ Hz, H-2)], two *para*-oriented benzene protons [δ_{H} 6.73 (1H, s, H-11) and 7.87 (1H, s, H-14)], one set of ABX coupling system neighboring to the carbonyl group [δ_{H} 1.85 (1H, dd, $J = 13.6, 4.0$ Hz, H-5), 2.56 (1H, dd, $J = 18.0, 13.6$ Hz, H _{β} -6), and 2.69 (1H, dd, $J = 18.0, 4.0$ Hz, H _{α} -6)], an isopropyl group [δ_{H} 1.17 (3H, d, $J = 6.8$ Hz, H-17), 1.19 (3H, d, $J = 6.8$ Hz, H-16), and 3.22 (1H, sept, $J = 6.8$ Hz, H-15)], and one methoxy group [δ_{H} 3.87 (3H, s)]. A typical downshifted H _{β} -1 signal of dehydroabietane diterpene at δ_{H} 2.64 (1H, dd, $J = 12.0, 4.0$ Hz) was also found [35]. 21 carbon signals were observed in the ^{13}C NMR spectrum of **2** and were differentiated by DEPT experiments as five methyl, three aliphatic methylene, two aliphatic methine, two aliphatic quaternary, one oxygenated methine, two olefinic methine, four quaternary olefinic, one carbonyl, and one methoxy carbons. By comparing the ^{13}C NMR data of **2** with that of sugiol methyl ether (**3**) [35], the major differences were the ^{13}C NMR chemical shifts of C-1–4, Me-18, Me-19, and Me-20 in ring A. An additional oxymethine (δ_{H} 4.10, H-2) showed ^1H - ^1H correlations with H α -1 (δ_{H} 1.26) and H α -3 (δ_{H} 1.51) and NOESY correlation with Me-19 (δ_{H} 1.03) and Me-20 (δ_{H} 1.26) suggested that the hydroxyl group was attached on C-2 (δ_{C} 65.1) in α -equatorial orientation (Figure 2) [36]. From the above evidences, compound **2** was thus formulated as 2 α -hydroxy-12-*O*-methylsugiol.

Xanthine oxidase is a key enzyme that catalyzes the oxidation of oxypurines to produce uric acid in the purine metabolic pathway and plays an important role in causing gout [37]. Since sugiol was reported as a potential inhibitor of xanthine oxidase by Lin *et al.* [38], compounds **1** and **2** were evaluated their xanthine oxidase inhibitory activity [39]. Compound **2** showed 13.5% inhibition towards xanthine oxidase enzyme at the concentration of $75\ \mu\text{M}$, while compound **1** was inactive.

Experimental

General experimental procedures: Optical rotations were measured using a JASCO DIP-180 digital polarimeter. UV and IR spectra were recorded on a Shimadzu UV-1601PC and a Perkin-Elmer 983 G spectrophotometer, respectively. ^1H - and ^{13}C -NMR spectra were recorded in CDCl_3 at room temperature on a Varian-Unity-Plus-400 spectrometer with residual solvent signals as internal reference. Chemical shifts are given in δ values and coupling constants (J) are given in hertz (Hz). EI-MS and HR-EI-MS were measured with a Jeol-JMS-HX300 mass spectrometer. Silica gel (230–400 mesh; Merck & Co., Inc.) was used for column chromatography (CC), and pre-coated silica gel plates (60 F-254; Merck & Co., Inc.) were used for TLC. Semi-preparative HPLC was performed using a normal phase column (Purospher STAR Si, 5 mm, 250×10 mm; Merck & Co., Inc.) on a LDC Analytical-III system.

Plant material: The bark of *C. japonica* D. Don was collected in Sitou, Taiwan in June, 2000. The plant material was identified by Prof. Shao-Shun Ying, Department of Forestry, National Taiwan University. A voucher specimen (TCF13443) has been deposited at the Herbarium of the Department of Forestry, NCHU, Taiwan.

Extraction and isolation: The air-dried bark of *C. japonica* (16.0 kg) was extracted by maceration with MeOH (100 L) three times

(7 days each time) at room temperature. The combined MeOH extract was concentrated under reduced pressure to afford a crude extract (480 g), which was suspended in H₂O (1 L), and then partitioned between H₂O and EtOAc (1 L) for three times. The EtOAc soluble fraction (430 g) was subjected to a silica gel (4.0 kg) column, eluted with *n*-hexane–EtOAc and EtOAc–MeOH mixtures to give 11 fractions, fr. 1 (2.6 g), 2 (29.4 g), 3 (47.8 g), 4 (92.4 g), 5 (21.6 g), 6 (18.1 g), 7 (22.5 g), 8 (35.8 g), 9 (19.2 g), 10 (44.2 g), and 11 (72.2 g). Fr. 3 from hexane/AcOEt (9:1) elution (47.8 g) was further purified through a silica gel column (7×60 cm), eluted with hexane/CH₂Cl₂ (1:0–0:1) to obtain nine fractions, 3A–3I. Further purification of subfraction 3E by HPLC gave **1** (2.1 mg) using hexane/AcOEt (9:1). Fr. 4 from *n*-hexane–EtOAc (4:1) elution (92.4 g), was further purified through a silica gel column (7×60 cm), eluted with a gradient mixture of CH₂Cl₂–EtOAc (100:1 to 0:1) to obtain sixteen fractions, 4A–4P. Further purification of subfraction 4F by HPLC afforded **2** (1.9 mg) using *n*-hexane–EtOAc (4:1).

Fungus-Growing Ant's Microbial Interaction of <i>Streptomyces</i> sp. and <i>Escovopsis</i> sp. through Molecular Networking and MALDI Imaging	63
Cristopher A. Boya P., Christian Martin H., Hermógenes Fernández-Marín and Marcelino Gutiérrez	
Morphological and Phytochemical Characterization of <i>Piper mosenii</i>	67
Tailyn Zermiani, Matheus C. Santos, Fabiane M. Lobato, Vinicius B. Blödorn, Fernanda S. M. Andrade, Leticia C. Lacava, Thamis Y. Inoue, Renê A. Ferreira, Elsie F. Guimarães, Marina S. Machado, Ruth M. Lucinda-Silva and Ângela Malheiros	
Bioactivity Profiling of Plant Biodiversity of Panama by High Throughput Screening	71
Anuradha Roy, Peter McDonald, Barbara N. Timmermann, Mahabir Gupta and Rathnam Chaguturu	
Composition of Essential Oil from <i>Piper jacquemontianum</i> from Eight Provenances of Guatemala	75
Armando Cáceres, Sully M. Cruz, José V. Martínez-Arevalo, Amelia T. Henriques and Miriam A. Apel	
Essential Oil of <i>Piper oradendron</i> from the Pacific Slope of Guatemala	79
José V. Martínez-Arevalo, Sully M. Cruz, Miriam A. Apel, Amélia T. Henriques and Armando Cáceres	
Effects of Essential Oils from Two Species of Piperaceae on Parasitized and Unparasitized Eggs of <i>Oebalus insularis</i> (Heteroptera: Pentatomidae) by <i>Telenomus podisi</i> (Hymenoptera: Platygasteridae)	83
Bruno Zachrisson, Ana Santana and Mahabir Gupta	
 <u>Accounts/Reviews</u>	
Alkaloids of the Cactaceae — The Classics	85
Bruce K. Cassels	
Essential Oils as Chemical Reagents in Heterocyclic Synthesis	91
Vladimir V. Kouznetsov	
<hr/>	
<u>Original Paper</u>	
New Abietane-type Diterpenoids from the Bark of <i>Cryptomeria japonica</i>	97
Chi-I Chang, Jih-Jung Cheng, Chin Hsu, Cheng-Chi Chen, Wei-Yi Cheng, Sheng-Yang Wang, Ching-Kuo Lee, Ming-Jen Cheng and Yueh-Hsiung Kuo	
Cladieunicellin T, a New Eunicellin-based Diterpenoid Produced by the Octocoral <i>Cladiella</i> sp.	101
Zhi-Jun Zhang, Bo-Rong Peng, Chiung-Chih Hu, Nai-Cheng Lin, Jia-Wen Yao, Mei-Chin Lu, Zhi-Hong Wen, Yang-Chang Wu and Ping-Jyun Sung	
Chemical Constituents from Stems of <i>Pileostegia viburnoides</i>	103
Xiao-Jun Li, Kwan-Woo Kim, Qin-Peng Zou, Zu-Zhen Liu, Hyun-Cheol Oh, Youn-Chul Kim and Xiang-Qian Liu	
Nor-kurarinone Characteristic of Chinese <i>Sophora flavescens</i>	107
Ryuichiro Suzuki, Utsumi Takahiro, Risa Takao and Yoshiaki Shirataki	
A New Coumarin from the Roots of <i>Heracleum dissectum</i>	111
Changlong Zhang, Yang Gao, Yajie Peng, Xiaoqing Zhang and Hailong Zhang	
A New Tetrahydrofuran Lignan from <i>Premna serratifolia</i> Wood	113
So-Yeun Woo, Chin Piow Wong, Nwet Nwet Win, Shotaro Hoshino, Prema, Hla Ngwe, Ikuro Abe and Hiroyuki Morita	
Screening of Insecticidal Activity of Podophyllotoxin Analogues against <i>Athetis dissimilis</i>	117
Zhiping Che, Yuee Tian, Jinming Yang, Shengming Liu, Jia Jiang, Mei Hu and Genqiang Chen	
Synthesis, Structure and Antimicrobial Activity of Novel Metabolites from a Marine Actinomycete in Vietnam's East Sea	121
Duc-Tuan Cao, Thuy-Linh Nguyen, Van-Hieu Tran, Huong Doan-Thi-Mai, Quyen Vu-Thi, Mai-Anh Nguyen, Hong-Minh Le-Thi, Van-Minh Chau and Van-Cuong Pham	
Arugosins O-Q, New Fungal Metabolites from the Fungus <i>Xylariaceae</i> sp. Isolated from Leaves of <i>Lansium domesticum</i> (Meliaceae)	125
Rudiyansyah, Andi Hairil Alimuddin, Masriani, Rini Muharini, Zhen Liu, Wenhan Lin, Rudolf Hartmann and Peter Proksch	
Chemical Constituents from the Fungus <i>Antrodia cinnamomea</i>	129
Ming-Der Wu, Ming-Jen Cheng, Yen-Lin Chen, Hsun-Hsuo-Chang, Yueh-Hsiung Kuo, Chih-Chuan Lin and Ho-Cheng Wu	
A Concise and Stereoselective Total Synthesis of Paecilomycin E	131
A. Srinivas Reddy, Gundamalla Bhavani, Sandhya Jonnala, Rajashaker Bantu and B. V. Subba Reddy	
First Stereoselective Total Synthesis of (3<i>S</i>,7<i>R</i>)-De-<i>O</i>-methylbotryosphaeriodiplodin	135
Jhillu S. Yadav, Chitteti Divya Vani, Mule Chowdeswari, K. Ananthalakshmi, N. Bhasker and Basi V. Subba Reddy	
Bacilohydrin A, a New Cytotoxic Cyclic Lipopeptide of Surfactins Class Produced by <i>Bacillus</i> sp. SY27F from the Indian Ocean Hydrothermal Vent	141
Hong Zhou, Yu He, Yongqi Tian, Bailin Cong and Huanghao Yang	
Anti-protozoal Activity of Conifer Green Needle Complex Against <i>Trichomonas vaginalis</i>	147
Lidia B. Kulyashova, Natalia Roschina, Tamara V. Nikitina and Vagif S. Soultanov	
Commercial Essential Oil Combinations against Topical Fungal Pathogens	151
Ané Orchard, Sandy F. van Vuuren and Alvaro M. Viljoen	

Natural Product Communications

Volume 14, Number 1

Contents

	<i>Page</i>
<u>Editorial Message</u>	<i>i</i>
<u>Editorial</u> Pawan K. Agrawal	<i>iii</i>
<u>Preface</u> K.S. Jagannatha Rao, Matthias Hamburger, Rachel Mata, Susana Zacchino	<i>v</i>
<u>Original Paper</u>	<u>Page</u>
Synergism between Terbinafine and a Neo-clerodane Dimer or a Monomer Isolated from <i>Baccharis flabellata</i> against <i>Trichophyton rubrum</i> Maria Victoria Rodriguez, Estefanía Butassi, Matías Funes and Susana A. Zacchino	1
<i>In Vivo</i> and <i>In Vitro</i> α-Glucosidase Inhibitory Activity of Perfoliatin A from <i>Melampodium perfoliatum</i> Laura Flores-Bocanegra, Rafael Torres-Colín, Martín González-Andrade, José S. Calderón and Rachel Mata	5
Triterpenoidal and Phenolic Compounds Isolated from the Aerial Parts of <i>Helicteres hirsuta</i> and their Cytotoxicity on Several Cancer Cell Lines Triet Thanh Nguyen, Nadine Kretschmer, Eva-Maria Pferschy-Wenzig, Olaf Kunert and Rudolf Bauer	7
A Selective Ion HPLC-APCI-MS Method for the Quantification of Pentacyclic Triterpenes in an Anxiolytic Botanical Dietary Supplement for the Animal Health Market Rui Liu, Ana-Francis Carballo-Arce, Ranpreet Singh, Ammar Saleem, Marco Rocha, Martha Mullally, Marco Otarola-Rojas, Luis Poveda Alvarrez, Pablo Sanchez-Vindas, Mario Garcia, John Baker, Zul Merali, Jose-Antonio Guerrero-Analco, Tony Durst, Cory Harris and John Arnason	11
Identification of Major α-Glucosidase Inhibitors from Stem Bark of Panamanian Mangrove Plant <i>Pelliciera rhizophorae</i> Lilia Cherigo and Sergio Martínez-Luis	15
Triterpenoid Saponins from the Roots of <i>Glycyrrhiza glabra</i> Qingyao Shou, Ping Jiao, Mei Hong, Qi Jia, Indra Prakash, Sangphyo Hong, Bin Wang, Allison Bechman and Gil Ma	19
Chemical Characterization of the Hydroethanolic Extract of the Inner Stem Bark of <i>Dilodendron bipinnatum</i>. Comparative Cytotoxic Evaluation and Anti-inflammatory Potential of a Simple Mixture of its Isolates 3-O-β-Glucopyranosyl-β-sitosterol and 3-O-β-Glucopyranosyl-stigmasterol Karoline Costa Lima, Domingos Tabajara de Oliveira Martins, Antonio Macho, Ruberlei Godinho de Oliveira, Eduarda Pavan, Lorena Suelen Ribeiro Martelli, Leila Beatriz Silva Pacheco, Virginia Claudia da Silva, Tereza Auxiliadora Nascimento Ribeiro, Mário Geraldo de Carvalho and Paulo Teixeira de Sousa Jr	23
Biotransformation to Produce the Anticancer Compound Colchicoside Using Cell Suspension Cultures of <i>Astragalus vesicarius</i> Plant Species Yancho Zarev, Pavlinka Popova, Kenn Foubert, Sandra Apers, Arnold Vlietinck, Luc Pieters and Iliana Ionkova	27
Antiparasitic Compounds from the Panamanian Marine Bacterium <i>Pseudomonas aeruginosa</i> Sergio Martínez-Luis, Lilia Cherigo, Carmenza Spadafora and Marcelino Gutiérrez	31
<i>In vitro</i> Antimalarial Evaluations and Cytotoxicity Investigations of <i>Carica papaya</i> Leaves and Carpaine Woon-Chien Teng, Wilson Chan, Rossarin Suwanarusk, Alice Ong, Han-Kiat Ho, Bruce Russell, Laurent Rénia and Hwee-Ling Koh	33
Chemical Composition and Antimycoplasmic Activity of <i>Eugenia mattosii</i> Leaves, Stems and Isolated Compounds Giovana Vecchi, Adrielli Tenfen, Ariela Maína Boeder, Lorena Hernandez-Gómez, Caio Maurício Mendes de Córdova, Franco Delle Monache and Valdir Cechinel Filho	37
HPLC-Based Activity Profiling for GABA_A Receptor Modulators in <i>Murraya exotica</i> Nova Syafni, Fahimeh Moradi-Afrapoli, Ombeline Danton, Anke Wilhelm, Marco Stadler, Steffen Hering, Olivier Potterat and Matthias Hamburger	41
Extraction Optimization of 5,7-Dihydroxy-6,8,4'-trimethoxyflavonol, a Bioactive Flavonoid from <i>Rubus rosifolius</i> (Rosaceae) Leaves Janieire Lorraine da Rocha Pittarello, Marcel Petreanu, Valdir Cechinel Filho, Clóvis Antonio Rodrigues, Luiz Carlos Klein-Júnior and Rivaldo Niero	47
Constituents of <i>Talisia nervosa</i> with Potential Utility against Metabolic Syndrome Yelkaira Vásquez, Jianping Zhao, Shabana I. Khan, Mahabir P. Gupta and Ikhlás A. Khan	51
Antiparasitic Metabolites from <i>Hyptis brevipes</i>, a Tacana Medicinal Plant Ivan Limachi, Claudia Condo, Camila Palma, Nelida Nina, Efrain Salamanca, Juan C. Ticona, Enrique Udaeta, Ninoska Flores, Alcides Serato, Natalio Marupa, Benigno Chao, Gladys Ibaguari, Constantino Nay, Soffie Manner, Olov Sterner and Alberto Giménez	55
Quantification of <i>Sambucus nigra</i> (Adoxaceae) Markers Related to Tincture Stability Letícia D. Testoni, Angelita B. de Souza, Clarissa de M. A. Krueger, Nara L. M. Quintão, Angelica G. Couto and Tania M. B. Bresolin	59
