The chemical composition, and antioxidant and antimicrobial activities of the essential oil isolated from the leaf of *Machilus japonica* from Taiwan have been investigated. The essential oil from the fresh leaves was isolated using hydrodistillation in a Clevenger-type apparatus, and characterized by GC–FID and GC–MS. A total of 97 compounds were identified, representing 100% of the oil. The main components identified were α -phellandrene (14.5%), α -pinene (12.8%), thymol (12.6%), β -pinene (8.3%), α -terpineol (6.5%) and carvacrol (6.0%). The antioxidant activity of the oil was tested by the DPPH (2,2-diphenyl-1-picrylhydrazyl) free radical scavenging capability test. The results showed that the IC₅₀ was 51.8 µg/mL. The antimicrobial activity of the oil was tested by the disc diffusion and micro-broth dilution methods against ten microbial species. The oil exhibited strong growth suppression against Gram-positive bacteria and yeast, with inhibition zones of 48~54 mm and MIC values of 16.12~32.25 µg/mL, respectively. For the antioxidant and antimicrobial activities of the oil, the active source compounds were determined to be thymol and carvacrol.

Keywords: Machilus japonica, Lauraceae, Essential oil, Antioxidant activity, Antimicrobial activity, Thymol, Carvacrol.

Machilus japonica Sieb. & Zucc. (Lauraceae) is a large evergreen tree widely distributed in the broad leafed forests from the lowlands to an altitude of 1300~2000 m throughout southern Japan, the Ryukyus, south Korea and Taiwan [1]. Scanty references were found regarding the chemical compositions of this species [2-6]. However, in Taiwan, there is no report of the essential oil composition and bioactivities for M. japonica. Worldwide, only two reports, are known, one by Komae and Hayashi [5] in Japan, and the other by van Khien et al. [6] in Vietnam. Furthermore, both papers only dealt with the compositions, and there was no comment on their bioactivities. Therefore, in this study, the essential oil from the leaves of *M. japonica* was first isolated using hydrodistillation, and then analyzed. The second part of the study examined the antioxidant and antimicrobial activities of the leaf oil. The purpose of this work was to establish a chemical basis for the effective multipurpose utilization of the species.

Hydrodistillation of M. japonica leaves produced a yellow-colored oil with a yield of 2.86 ± 0.05 mL/100 g, based on the dry weight of leaves. Ninety-seven compounds were identified (Table 1), of which monoterpene hydrocarbons were predominant (50.5%), followed by oxygenated monoterpenes (31.7%), sesquiterpene hydrocarbons (13.0%), oxygenated sesquiterpenes (3.6%), and non-terpenoids (1.3%). Among the monoterpene hydrocarbons, α -phellandrene (14.5%), α -pinene (12.8%), and β -pinene (8.3%) were the major compounds, and of the oxygenated monoterpenes, thymol (12.6%), α -terpineol (6.5%) and carvacrol (6.0%). Among the sesquiterpene hydrocarbons, β -caryophyllene (5.1%) was the main component. Relevant literature on the leaf essential oils of M. japonica is rare. Only Komae and Hayashi [5] and van Khien et al. [6] have made previous studies. The former [5] studied the leaf oil from Japan. They identified a total of 9 compounds with the main components being caryophyllene (18.6%) and β -phellandrene (14.7%). van Khien et al. [6] reported on M. japonica leaf oil from Vietnam. They identified a total of 18 compounds with the main ones being α -phellandrene (60.2%), β -phellandrene (10.5%), and

p-cymene (20.3%). Comparing the main components reported in the two reports, the M. *japonica* leaf oils showed markedly divergent compositions.

From the results presented above, the leaf oil constituents of *M. japonica* were primarily monoterpenoids, which differed from *M. kusanoi* [7], *M. pseudolongifolia* [8], *M. philippinensis* [9], *M. obovatifolia* [10], *M. velutina* [11], and *M. thunbergii* [12], all of which contained mostly sesquiterpenoids.

The leaf oil of *M. japonica* was tested for its DPPH free radical scavenging capability. Ascorbic acid was used as a positive control. The IC₅₀ for the DPPH free radical scavenging capability of the leaf oil was 51.8 µg/mL. The individual main components of the leaf essential oil, α -pinene, β -pinene, α -phellandrene, *p*-cymene, α -terpineol, thymol, carvacrol, and β -caryophyllene, were also compared for their DPPH free radical scavenging capability. The results showed that the DPPH free radical scavenging capabilities in a decreasing order were thymol (IC₅₀ = $31.4 \mu g/mL$), carvacrol (IC₅₀ = 38.7 μ g/mL), α -pinene, β -pinene, α -phellandrene, *p*cymene, α -terpineol, and β -caryophyllene (IC₅₀> 2000 µg/mL). Hence, we deduced that the phenolic compounds were mainly responsible for the radical scavenging. The results are in congruency with the conclusions of several other reports [14-19]. When the DPPH free radical scavenging capabilities of the leaf essential oil were compared with those of leaf oils of different provenances from Taiwan, such as Cinnamomum osmophloeum, with IC₅₀ values ranging from 33.4 to 708.5 µg/mL [20], the leaf essential oil was within the same range. The threshold concentration also compared favorably with the IC₅₀ values of 460 µg/mL for the leaf oil of Nigella sativa [21] and 500 µg/mL for the leaf oil of Curcuma zedoaria [22].

The essential oil of *M. japonica* was tested against three Grampositive and five Gram-negative bacteria, as well as two fungi. The results, presented in Table 2, indicated a moderate to strong growth

Table 1: Chemical composition of the leaf oil of M. japonica.

suppression against all ten microbes. The most sensitive microorganisms were Bacillus cereus, Staphylococcus aureus, S. epidermidis, and Candida albicans, with inhibition zones of 48 to 54 mm and MIC values of 16.12~32.25 µg/mL, respectively. The essential oil showed superior suppressive activity against the Grampositive bacteria than either the Gram-negative bacteria or fungi. The probable cause of the susceptibility of Gram-positive bacteria and relative tolerance of Gram-negative bacteria to essential oils has been correlated with the presence of a hydrophilic outer layer [23]. It is presumed that penetration of hydrophobic components in Gram- negative microorganisms is more difficult due to the presence of a second physical barrier formed by the outer membrane [24,25]. Comparing the antimicrobial activities of the leaf essential oil of M. japonica with those of M. kusanoi [7], M. pseudolongifolia [8], and Litsea linii [26], and the twig oil extracted from L. mushaensis [26], the leaf essential oil of M. japonica was superior. The results verify that M. japonica leaf oil has excellent antimicrobial activity. However, to ascertain the source compounds of the antimicrobial activity from *M. japonica*, the main components were individually tested for antimicrobial activities. The results indicated that the active source compounds were thymol and carvacrol. Various studies support the argument that these compounds are highly active in suppressing microbial growth [27-29].

Experimental

Plant materials: Fresh leaves of *M. japonica* were collected in July 2010 from Tiaomikeng (Nantou County, central Taiwan, elevation 1580 m, N 23° 57′ 09″, E 120° 54′ 28″). The samples were compared with specimen no. TAIF 92852 from the Herbarium of the Taiwan Forestry Research Institute and were positively identified by Prof. Yen-Hsueh Tseng of National Chung Hsing University (NCHU). The voucher specimen (CLH-015) was deposited in the NCHU herbarium. Before extraction, the leaves were air dried at room temperature and protected from the light for one week.

Isolation of leaf essential oil: The essential oil of the dry leaves (200 g) was extracted using a Clevenger-type apparatus using a hydrodistillation technique. After extraction, the volume of essential oil obtained was measured, and the essential oil was stored in glass containers hermetically sealed with rubber lids, covered with aluminum foil to protect the contents from light, and kept refrigerated at 8°C until used. The oil yield and all test data are the average of triplicate analyses.

Essential oil analysis: A Hewlett-Packard HP 6890 gas chromatograph equipped with a DB-5 fused silica capillary column (30 m x 0.25 mm x 0.25 µm film thickness, J&W Scientific) and a FID detector was used for the quantitative determination of oil components. Oven temperature was programmed as follows: 50°C

for 2 min, rising to 250°C at 5 °C/min. Injector temperature: 270°C. Carrier gas: He with a flow rate of 1 mL/min. Detector temperature: 250°C, split ratio: 1:10. Diluted samples (1.0 μ L, 1/100, v/v, in ethyl acetate) were injected manually in the split mode. Identification of the oil components was based on their retention indices and mass spectra, obtained from GC/MS analysis on a Hewlett-Packard HP 6890/HP5973 equipped with a DB-5 fused silica capillary column (30 m x 0.25 mm x 0.25 μ m film thickness, J&W Scientific). The GC analysis parameters listed above and the MS were obtained (full scan mode: scan time: 0.3 s, mass range was *m*/z 30-500) in the EI mode at 70 eV. All data were the average of triplicate analyses.

Component identification: Identification of the leaf essential oil constituents was based on comparisons of retention index (RI) [13], retention times (RT), and mass spectra with those obtained from authentic standards and/or the NIST and Wiley libraries spectra, and literature [13,30].

DPPH (2,2-diphenyl-1-picrylhydrazyl) free radical scavenging capability test: The method of Ho *et al.* [31] was used for DPPH assay in this study. Fifty μ L of various dilutions of the oils were mixed with 5 mL of a 0.004% methanol solution of DPPH. After an incubation period of 30 min, the absorbance of the samples was

determined at 517 nm using a Jasco 7800 spectrophotometer. Tests were carried out in triplicate, and ascorbic acid was used as a positive control.

Antimicrobial activity [32]: Discs containing 15 µL and 30 µL of the oil dissolved in dimethylsulfoxide (DMSO) were placed on the inoculated plates with test microorganisms. Growth inhibition zones (including disc diameter of 6 mm) were measured after 24 h and 48 h of incubation at 37°C and 24°C for bacteria and fungi, respectively. Gentamicin and tetracycline for bacteria, and nystatin for fungi were used as positive controls. Microbial strains were obtained from the Culture Collection and Research Center of the Food Industry Research and Development Institute, Hsinchu City, Taiwan. The microbial strains included 5 Gram-negative bacteria: Escherichia coli (IFO 3301), Enterobacter aerogenes (ATCC 13048), Klebsiella pneumoniae (ATCC 4352), Pseudomonas aeruginosa (IFO 3080), and Vibrio parahaemolyticus (ATCC 17803); 3 Gram-positive bacteria: B. cereus (ATCC 11778), S. aureus (ATCC 6538P), and S. epidermidis (ATCC 12228); 1 fungus: Aspergillus niger (ATCC 16404) and 1 yeast: C. albicans (ATCC 10231). Minimum inhibitory concentration (MIC) values were measured by the microdilution broth susceptibility assay recommended by NCCLS [33] and as reported earlier [34].

Ternary Liquid-Liquid Equilibria Measurement for Epoxidized Soybean Oil + Acetic Acid + Water Shuang-Fei Cai, Li-Sheng Wang, Guo-Qing Yan, Yi Li, Yun-Xia Feng and Rong-Gang Linghu	75
Chemical Constituents of the Essential Oil from Aerial Parts and Fruit of Anisosciadium orientale Vahid Rowshan, Ahmad Hatami, Atefeh Bahmanzadegan and Mahnaz Yazdani	79
GC-MS Analysis of Ziziphora clinopodioides Essential Oil from North Xinjiang, China Xiaoying Zhou, Qian Yu, Haiyan Gong and Shuge Tian	81
Analysis of the Essential Oil of <i>Teucrium polium</i> ssp. <i>capitatum</i> from the Balkan Peninsula Violeta Mitić, Olga Jovanović, Vesna Stankov-Jovanović, Bojan Zlatkovic and Gordana Stojanovic	83
Composition of the Essential Oil of Pogostemon travancoricus var. travancoricus Ramar Murugan and Gopal Rao Mallavarapu	87
Liquid CO ₂ Extraction of Jasminum grandiflorum and Comparison with Conventional Processes Om Prakash, Deeptanjali Sahoo and Prasant Kumar Rout	89
Chemical Composition of Volatile Oils from the Pericarps of Indian Sandalwood (<i>Santalum album</i>) by Different Extraction Methods	
Xin Hua Zhang, Jaime A. Teixeira da Silva, Yong Xia Jia, Jie Tang Zhao and Guo Hua Ma	93
Fast Quality Assessment of German Chamomile (Matricaria chamomilla L.) by Headspace Solid-Phase Microextraction:	
Influence of Flower Development Stage Mohammad Rafieiolhossaini, An Adams, Hamid Sodaeizadeh, Patrick Van Damme and Norbert De Kimpe	97
Floral Scent Composition of <i>Plumeria tuberculata</i> Analyzed by HS-SPME Disnelys Báez, Jorge A. Pino and Diego Morales	101
Identification and Quantification of the Antimicrobial Components of a Citrus Essential Oil Vapor Carol A. Phillips, Konstantinos Gkatzionis, Katie Laird, Jodie Score, Avinash Kant and Mark D. Fielder	103
Composition, Antioxidant and Antimicrobial Activities of the Leaf Essential Oil of Machilus japonica from Taiwan Chen-Lung Ho and Yu-Chang Su	109
Chemical Composition, Antimicrobial, Antiradical and Anticholinesterase activity of the Essential Oil of	
<i>Pulicaria stephanocarpa</i> from Soqotra Nasser A. Awadh Ali, Rebecca A. Crouch, Mohamed A. Al-Fatimi, Norbert Arnold, Axel Teichert, William N. Setzer and Ludger Wessjohann	113
Composition of the Essential Oils and Antibacterial Activities of Hymenocrater yazdianus, Stachys obtusicrena and Neneta asterotricha Three Labiatae Herbs Growing Wild in Iran	
Shiva Masoudi, Abdolhossein Rustaiyan, Razieh Mohebat and Mohammad Hossein Mosslemin	117
Antibacterial Activities of Essential Oils Extracted from Leaves of <i>Murraya koenigii</i> by Solvent-Free Microwave Extraction and Hydro-Distillation	
Naciye Erkan, Zhou Tao, H. P. Vasantha Rupasinghe, Burcu Uysal and Birsen S. Oksal	121
Chemical Composition, Antifungal and Herbicidal Effects of Essential oil Isolated from Chersodoma argentina (Asteraceae) Rosana Alarcón, Soledad Ocampos, Adriana Pacciaroni and Virginia Sosa	125
Essential Oil Composition and Acaricidal Activity of <i>Schinus terebinthifolius</i> from Atlantic Forest of Pernambuco, Brazil against <i>Tetranychus urticae</i>	
Aline Fonseca do Nascimento, Claudio Augusto Gomes da Camara, Marcílio Martins de Moraes and Clécio Souza Ramos	129
Evaluation of the Anti- <i>Leishmania major</i> Activity of <i>Satureja bakhtiarica</i> Essential Oil <i>in vitro</i> Ghasem Mohammadpour, Eisa Tahmasbpour Marzony and Mahin Farahmand	133
<i>Spartium junceum</i> Aromatic Water: Chemical Composition and Antitumor activity Teresa Cerchiara, Serafina V. Straface, Giuseppe Chidichimo, Emilia L. Belsito, Angelo Liguori, Barbara Luppi, Federica Bigucci and Vittorio Zecchi	137

Natural Product Communications 2012

Volume 7, Number 1

Contents

Original Paper

New Iridoid from Aerial Parts of <i>Mussaenda roxburghii</i> Utpal Chandra De, Ranjit Ghosh, Sanjib Chowdhury and Biswanath Dinda	1
A New Megastigmane Glycoside, Phoenixoside A, from Phoenix dactylifera Sumbul Azmat, Aqib Zahoor, Rehana Ifzal, Viqar Uddin Ahmad and Faryal Vali Mohammed	3
New 3,4-Seco-ent-kaurene Dimers from Croton micans Elsa Mateu, Katiuska Chavez, Ricarda Riina, Reinaldo S. Compagnone, Franco Delle Monache and Alírica I. Suárez	5
Diacarperoxide S, New Norterpene Cyclic Peroxide from the Sponge <i>Diacarnus megaspinorhabdosa</i> Sabrin R. M. Ibrahim	9
Constituents of Kenyan Gardenia volkensii Esther W. Kinuthia, Moses K. Langat, Elizabeth M. Mwangi and Peter K Cheplogoi	13
Oral Administration of <i>Cimicifuga racemosa</i> Extract Attenuates Immobilization Stress-Induced Reactions Isao Nadaoka, Kazuki Watanabe, Masaaki Yasue, Manabu Sami, Yasushi Kitagawa and Yoshihiro Mimaki	.OGY 15
Complete NMR Assignments of Tubulosine Venkata Siva Satyanarayana Kantamreddi and Colin W. Wright	19
Application of Mixture Analysis to Crude Materials from Natural Resources (III) ^[1] : NMR Spectral Studies to Anal Chalcones from <i>Angelica keiskei</i>	yze
Eriko Fukuda, Masaki Baba, Yoshihiro Uesawa, Osamu Kamo, Kazunori Arifuku, Koji Tsubono and Yoshihito Okada	21
A Validated Chromatographic Method for the Determination of Flavonoids in <i>Copaifera langsdorffii</i> by HPLC João Paulo B. de Sousa, Ana Paula S. Brancalion, Milton G. Júnior and Jairo K. Bastos	25
Luteolin Induces Mitochondria-dependent Apoptosis in Human Lung Adenocarcinoma Cell Qing Chen, Shengming Liu, Jinghong Chen, Qianqian Zhang, Shijie Lin, Zhiming Chen and Jianwei Jiang	BIODIVERSIT29
Diuretic Activity of Lophophytum leandri Antonio Bracci, Anibal G. Amat, Francesco Maione, Carla Cicala, Nicola Mascolo and Vincenzo De Feo	33
Evaluation of the Hypocholesterolemic Effect and Phytochemical Screening of the Hydroethanolic Extract of <i>Crataegus aronia</i> from Jordan	
Entisar K. Al-Hallaq, Fatma U. Afifi and Shtaywy S. Abdalla	35
Secondary Metabolites, Cytotoxic Response by Neutral Red Retention and Protective Effect Against H ₂ O ₂ Induced Cytotoxicity of <i>Sedum caespitosum</i> Didem Söbretoğlu and Suna Sabuncuoğlu	30
Effect of Hibiscus sabdariffa and its Anthoevanins on some Reproductive Aspects in Rate	
Badreldin H. Ali, Intisar Al-Lawati, Sumyia Beegam, Amal Ziada, Suhail Al salam, Abderrahim Nemmar and Gerald Blue	nden 41
Hang Ma, Tao Yuan, Antonio González-Sarrías, Liya Li, Maxwell E. Edmonds and Navindra P. Seeram	BIOSYNTHES
Phytochemical Analysis and Antioxidant Capacity of BM-21, a Bioactive Extract Rich in Polyphenolic Metabolites the Sea Grass Thalassia testudinum	from
Erik L. Regalado, Roberto Menendez, Olga Valdés, Ruth A. Morales, Abilio Laguna, Olivier P. Thomas, Yasnay Hernand Clara Nogueiras and Anake Kijjoa	lez, 47
Herbicidal Activity of Curvulinic Acid Isolated from <i>Nimbya alternantherae</i> Jun Li, Yonghao Ye, Xiaoyang Wang and Liyao Dong	51
Xanthones with Antiproliferative Effects on Prostate Cancer Cells from the Stem Bark of <i>Garcinia xanthochymus</i> Feng Ji, Zhanlin Li, Gaofeng Liu, Shengli Niu, Nan Zhao, Xiaogiu Liu and Huiming Hua	53
Aromatic Hydroxyl Group Plays a Critical Role in Antibacterial Activity of the Curcumin Analogues Mi Kyoung Kim, Jun Cheol Park and Youhoon Chong	57
Analysis of Danshen and Twelve Related Salvia Species Luyang Lu, Yuan Liu, Zhifeng Zhang and Hao Zhang	59
Meliloester, a New Melilotic Ester from <i>Melilotus alba</i> Rasheeda Khatoon, Nikhat Saba, Aqib Zahoor, Shazia Summer and Vigar Uddin Ahmad	61
A New Long-Chain Unsaturated Ester and Other Constituents of Hypericum tomentosum Ouassila Touafek, Zahia Kabouche, Joël Boustie and Christian Bruneau	63
Microbial Conversion of Tomato by a Plant Pathogenic Bacterium Pectobacterium atrosepticum: a Plant-Microbial	
Approach to Control Pathogenic Candida Species Vivek K. Bajpai, Sun Chul Kang, Soon-Gu Lee and Kwang-Hyun Baek	65
Antibacterial and Antiparasitic Effects of Bothropoides lutzi venom	
Ramon R.P.P.B. de Menezes, Alba F. C. Torres, Thiala S. J. da Silva, Daniel F. de Sousa, Danya B. Lima, Diva B. Norjos Nádia A. P. Nogueira, Maria F. Oliveira, Márcia R. de Oliveira, Helena S. A. Monteiro and Alice M. C. Martins	a, 71
